

Clínica Dental Goyanca

Executive Proposal

Local SEO Improvement · Fast Landing Page Launch · Automated Reporting

Executive Summary

Clínica Dental Goyanca has a clear opportunity to improve local visibility, launch a stronger landing page quickly, and eliminate time spent on manual reporting. The best path forward is connecting SEO, conversion, and reporting into one practical growth system — built for speed, measurable from day one.

Approach

The work begins with clarity and moves fast. A focused audit comes first, then high-impact SEO fixes, a new landing page, and clean performance tracking — creating immediate progress while laying a stronger long-term foundation.

Phase 1 — Audit & Discovery

Review current site structure and identify the highest-impact gaps:

Area	What We Check
Local SEO signals	NAP consistency, Google Business Profile, citations
On-page SEO	Titles, H1s, meta descriptions, internal linking
Technical health	Page speed, mobile experience, Core Web Vitals
Conversion	CTAs, booking flow, trust signals
Analytics	GA4 setup, goal tracking, Search Console coverage

Phase 2 — Local SEO

Strategy focused on **high-intent local searches** — not more traffic in general, but more qualified traffic from patients in Goya and nearby areas.

Priority Improvements

- **Service pages** — Clear, keyword-rich content per treatment
- **Location relevance** — City + neighborhood signals throughout the site
- **Structured data** — Local Business schema, reviews schema, FAQ schema
- **Internal linking** — Connect services, location, and trust pages
- **Trust signals** — Reviews, financing options, treatment information
- **FAQ content** — Answer real patient questions, capture long-tail searches

Target Intent Categories

Intent	Example Keywords
Emergency	dentista urgencias Goya, dolor de muela
Cosmetic	blanqueamiento dental, carillas
Orthodontics	ortodoncia Goya, brackets adultos
Implants	implantes dentales precio Goya
General	dentista Goya, clínica dental cerca

Phase 3 — New Landing Page

Fast launch. Built around conversion.

The page must explain the clinic clearly, load quickly, build trust immediately, and make booking easy through every available channel.

Core Sections

1. **Hero** — Clear value proposition + primary CTA (WhatsApp / phone)
2. **Services** — Top treatments with clear descriptions
3. **Why Us** — Differentiators: experience, technology, financing
4. **Social Proof** — Patient reviews, ratings, before/after
5. **Location & Hours** — Map embed, address, schedule
6. **Financing** — Payment options, accessibility messaging
7. **Contact** — WhatsApp, phone, and form — all in one section

Technical Standards

- Mobile-first, fully responsive
- Lighthouse score 90+ (Performance, SEO, Accessibility)
- Core Web Vitals: LCP < 2.5s, CLS < 0.1
- WhatsApp deep link with pre-filled message
- Structured data embedded

Reference Implementation — Dental Studio Landing

This is already done. Onmidental's own landing page is live — built with the same stack, structure, and SEO foundations proposed here for Goyanca.

Live demo	https://onmidental.vercel.app
Source code	https://github.com/DavidVique1998/onmidental

What was built

Feature	Detail
Animated hero	Scroll-driven 3D tooth model (Three.js / React Three Fiber)
AI chat assistant	Answers patient questions in real time — no cold starts
Full section coverage	Services · About · Clinics · Team · Financing · Reviews · Instagram

Feature	Detail
WhatsApp button	Floating CTA with pre-filled message
SEO foundation	sitemap.xml, robots.txt, Open Graph, JSON-LD (LocalBusiness + Dentist schema)
Performance	Next.js 16 App Router, Tailwind CSS v4, edge-runtime AI route
Deployment	Live on Vercel in production

The same structure, component library, and SEO patterns apply directly to the Goyanca landing. Starting from a proven base means faster delivery and lower risk.

Phase 4 — Reporting Automation

Manual reports replaced by an automated workflow.

Data Sources

- **Google Analytics 4** — Sessions, conversions, channel performance
- **Google Search Console** — Rankings, impressions, click-through rates
- **Lead events** — WhatsApp clicks, phone clicks, form submissions

Automated Report Output

Each report delivers:

1. Key metrics vs. prior period
2. Top-performing pages and search queries
3. Conversion funnel snapshot
4. Recommended next actions

Use of AI

AI accelerates execution and reduces repetitive work — human review keeps quality high.

Task	AI Role
Keyword clustering	Group and prioritize by intent and volume
Page copy	First-pass drafts for service pages and FAQs
FAQ generation	Extract real patient questions from search data
Landing page iteration	Fast variant testing and copy refinement
Report summaries	Auto-generate insights from raw analytics data

Why This Fit Is Strong

Onmidental already has the landing, the stack, and the SEO structure in place. Extending that to Goyanca means faster delivery, lower risk, and consistency across the network — not starting from zero.

Recommended 7-Day Sprint

Day	Deliverable
1–2	Full site audit — SEO, technical, analytics, conversion
3	Top local SEO fixes implemented
4–5	New landing page launched
6	Analytics connected — GA4, Search Console, lead events
7	First automated report generated and reviewed

Results measurable from day one. Growth compound over time.
